Brush dropped off at the site must be placed in the specified area. Follow the operator's instructions. Operator has instructions to inspect your load and advise you of any material that cannot be accepted.

Violators will be cited and/or have permit revoked.

Disposal Alternatives for Invasive Weed Management.

The State of Wisconsin DNR has come up with a policy concerning invasive weed management. This policy includes invasive weeds which must be collected separately from other yard waste. These rules apply to our disposal area.

Specific plant species this pertains to include garlic mustard, purple loosestrife, spotted knapweed, leafy spurge, crown vetch, dames rocket, yellow and white clover, wild parsnips, Canada thistle, common and cut leaf teasel, birds-foot trefoil and tansy.

Please place the whole plant (or their flower/seed heads) in a clear bag labeled "Invasive Plants—Please Landfill". Property owners should place these bags along with the other waste collection for the regular waste haulers. These waste haulers are authorized to accept these invasive plants by the DNR. Do not bring to the Brush Site as they will not be accepted.

A booklet of Mequon's 8 Most Unwanted Woodland Invaders can be picked up at Mequon City Hall. The booklet identifies these woodland invaders and their control methods.
