

Notice: An overflow is defined as a release of wastewater from a sewage collection system (SSO) or from a location within a sewage treatment facility (TFO) other than a permitted outfall structure, directly to a water of the state or land surface. Pursuant to s. 283.55(1)(dm), Wis. Stats., s. NR 210.21(4)(5)(6) Wis. Adm. Code and in accordance with reporting requirements in your WPDES permit, permittees shall submit a written report form for each overflow. This record is used to administer the water quality program, and any personally identifiable information may be provided to requesters as required under the Wisconsin Open Records law (ss. 19.31–19.39, Wis. Stats.)."

- Sanitary Sewer Overflow (SSO)**
 Treatment Facility Overflow (TFO)

Use one form per SSO location. Submit within five calendar days to your Department wastewater representative. Attach additional information as necessary to explain or document each overflow occurrence. A single SSO may be more than one day if the circumstance causing the overflow results in discharge duration more than 24 hours. If there is a stop and restart of the overflow within 24 hours, but it's caused by the same circumstances, report it as one SSO. If the discharges are separated by more than 24 hours, they should be reported as separate SSOs.

Overflow Explanation (This includes any information, whether the overflow was unavoidable to prevent loss of life, personal injury, or severe property damage and whether there were feasible alternatives to the overflow.)

Heavy rains over a short period of time caused high alarms at lift stations and surcharging in the system. Bypass pumping is set up when critical elevations in the manholes or wet wells are exceeded. Suction is set at levels to bypass critical elevations to avoid basement back-ups

Immediate Corrective Action and Steps Taken to Reduce this Overflow Volume and Impacts

Bypass pumping is set up when critical elevations in the manholes or wet wells are exceeded. Suction is set at levels to bypass critical elevations to avoid basement back-ups

Long Term Plan to Reduce, Eliminate, Prevent Reoccurrence of this Overflow

- The City has an annual program to rehabilitate sanitary sewers with the installation of cured-in-place pipe lining in the mainlines and to seal manholes to remove infiltration.
- The City has a program to reduce private property inflow and infiltration from entering the sanitary sewer system, and continues to implement projects in prioritized areas.
- The East Trunk Relief Sewer construction added capacity to the sanitary sewer system and was completed in 2019.
- A condition assessment for the Ranch Road Lift Station "E" has begun to evaluate upgrades and improvements.

Building Backups

Number of building backups occurring during this time in Area of Overflow: 0

Locations of Building Backups: none reported
